ExamDiff Pro: File and Folder Comparison Powerhouse

Thousand Oaks, CA (May, 2010) – PrestoSoft has released ExamDiff Pro v. 5.0, a powerful file and folder comparison tool for Windows that makes it easy to keep track of files and directories as they change over time. It's easy to synchronize directories, compare versions of documents, or identify tiny changes between different versions of any type of file.

The biggest new feature in version 5.0 is a Line Inspector panel that makes it easy to find differences between lines by displaying the currently selected line and its matching line, one on top of the other. Other new features include full Windows 7 support, synchronization buttons in directory comparison, Hide and Hide All commands for items in directory comparison, the ability to combine directory comparison sort results from both panes, and much, much more.

Unlike simple comparison utilities, ExamDiff Pro offers regular expression filters, visual binary file comparisons, word wrap support for comparing paragraphs, identification of line-, word-, and character-level differences, named sessions, and full-featured file editing. You can even compare Word, Excel, and PDF documents using ExamDiff Pro plug-ins.

Software developers can use ExamDiff Pro to track changes in files and folders, perform code reviews, and compare a local web site to its remote version on an FTP server. The program lets you ignore programming language comments in your comparisons, so you can focus on the source code. Syntax highlighting allows you to visualize the code that is being compared. The built-in editor lets you directly change the documents that you are comparing. You can even compare DLLs, EXEs, and other binary files.

ExamDiff Pro lets software testers optimize their time by automating their evaluation of test results. By validating test results against a baseline, errors and changes can be detected quickly. It's easy to save the file differences in a standard UNIX DIFF file, or to a dynamic HTML page. ExamDiff Pro 5.0 makes collaboration even simpler by introducing a convenient "Email Diff Report" button that, with a single click, creates an HTML diff report and launches the default email client to send it to a colleague.

The program lets all business users synchronize files and directories between PCs. When you work on a laptop, an office desktop, and a home desktop, it's easy to forget where to find the latest versions of files and folders. ExamDiff Pro quickly identifies the latest information, and synchronizes your computers.

ExamDiff Pro has all of the advanced features that you'd expect to find in a professional comparison application, including syntax highlighting, sophisticated search features, a command line interface, a plug-in library, drag-and-drop support, fuzzy matching, moved block recognition, Unicode support, and options for ignoring capitalization, white space, and comments.

Whether you're a businessperson who needs to track changes in text documents, a software developer who needs to manage multiple copies of source code, or a web developer who needs to quickly compare the differences in various versions of your web site, ExamDiff Pro has the tools that you need.

Pricing and Availability

ExamDiff Pro v. 5.0 runs under Windows 98/Me/NT4/2000/XP/2003/Vista/7/2008, costs $35 (US) for a single-user license, and may be purchased securely online from http://www.prestosoft.com . Multi-user and educational discounts are available. An evaluation version of ExamDiff Pro is available as a free download from http://www.prestosoft.com/download/edpro50.exe (5.81 Mb).

About PrestoSoft

Since 1997, PrestoSoft has been developing and marketing Windows productivity software for software developers, web site designers, businesses, and home users. In addition to ExamDiff Pro, the company also offers FtpVC, a full-featured version control system that uses ordinary Internet FTP connections to communicate among project team members. Unlike other version control systems that require complicated installations and maintenance on version control servers, FtpVC runs on any standard FTP server, and uses simple FTP communications to ensure that all team members know what their colleagues are working on.
